DETAILED ACTION

Allowable Subject Matter

1. Claims 1-12 are allowed.

Regarding Claim 1, the prior art neither teaches nor fairly suggests a color reproduction system comprising color image input means, color estimation means, color image output means, wherein the color estimation means includes **illumination light measuring means for measuring tristimulus values of observation illumination light, virtual illumination light spectrum calculation means for calculating a virtual illumination light spectrum that provides tristimulus values equal to the tristimulus values of the observation illumination light which are obtained by the illumination light measuring means**, and tristimulus value calculation means for calculating values of the object under the virtual illumination light spectrum from the color image signal, as claimed in Claim 1.

Claims 7, 8, and 9 are allowed under similar substance of Claim 1.

Primarily, the prior art fails to show the illumination light colorimeter for measuring tristimulus values of the observation illumination light on an object observation side.
